

Dear Residents,

The School of Medicine campus re-entry taskforce comprising key staff, faculty and administration has been meeting for long hours to thoroughly plan the resumption of educational and clinical training activities on the SOM campus. Please check the [School of Medicine Coronavirus Webpage](#) for details and regular updates.

The health and safety of our students, staff, faculty, and residents are very important to us, and so we require that you do the following at all times while you are on campus:

1. follow social distancing
2. wear a face covering
3. wash hands frequently

Along with the daily campus screening, there are strict guidelines we want everyone to follow. Be Warrior Strong and take the responsibility to educate your peers to follow these guidelines. Do not hesitate to remind anyone who is not following the safety guidelines. These are unprecedented times, and the scale at which we have to plan and execute measures to ensure your health and safety is massive.

Finally, we all understand that there is always an inherent risk in serving as physicians. While we are very concerned about COVID-19 and want to ensure your health and safety, we recognize that you will be around people who are sick and who may have diseases that are communicable and pose more health risks. Hence, we want you to take this as an opportunity to learn how best to protect yourselves while also serving the people who need your expertise and compassion the most.

Please read the details in this message carefully and fully adhere to all the requirements and expectations.

Health and Safety Guidelines While on Campus:

- **Basic expectations:** Everyone must wear a face mask, socially distance themselves by at least 6 feet, frequently wash their hands, and follow directional signage while they are in the campus buildings.
- **Warrior Safe Training:** If you plan on traveling to the SOM campus, please complete the *Be Warrior Safe* course created by the Wayne State Public Health Committee, a subcommittee of Wayne State's Restart Committee, by clicking on this [self-enrollment link](#).
- **Daily screening:** Everyone entering the campus must complete the [daily screener](#) and be cleared to enter the buildings.
- **Travel and testing:** For people who have traveled domestically, the Campus Health Center staff will reach out to find out from where the individual has traveled. If the location is not a CDC-identified high-risk zone, the individual will be cleared for campus. If it is a CDC-identified high-risk zone (which changes frequently based on current data), the recommendation is to quarantine for 14 days and monitor for symptoms. Please refer to [this link](#) for a detailed screening and testing protocol.

Thank you,

Mark E. Schweitzer, M.D.
Vice President, Health Affairs
Dean, Wayne State University School of Medicine
